int clapack_\$\displantum(const enum ATLAS_ORDER Order, const enum ATLAS_UPLO Uplo, const int N, TYPE *A, const int lda) int clapack_\$\displantum (const enum ATLAS_ORDER Order, const enum ATLAS_UPLO Uplo, const enum ATLAS_DIAG Diag, const int N, TYPE *A, const int lda)	$A = LL^{H}$ $A \leftarrow UU^{H}$ or $A \leftarrow L^{H}L$ $A \leftarrow A^{-1}$, given A is an Upper or Lower triangular matrix	S, D, C, Z S, D, C, Z

NOTES:

- C interface DESCRIPTIONs assume Order == CblasRowMajor. For column-major descriptions, consult the Fortran 77 descriptions.
- $\bullet\,$ All C functions return LAPACK's INFO parameter

- C Calling routines should include the BLAS header file, cblas.h.
- Cases separated by or above depend on user input or data type.
- More information available at http://math-atlas.sourceforge.net/.
